Maharashtra Talent Search Award

# Sarthak Karandikar

Building Existence | Into AI, IOT & Metaverse | Trying to solve the problem of existence through exploration
Pune, Maharashtra, India

## Summary

Hey guys, I am Sarthak, a teenager born and raised in India, Trying many things out I got to know that my true passion is science & technology. So I try to make my work life revolve around it

After facing life's suffering, I realized that this transactional world could never offer me peace and all this is so uncertain, transitory. I went through a breakdown that almost got me killed. Then turning inside, I came across this enlightenment thing that promised eternal peace. I decided to try this thing and reasoned and questioned for a couple of years. At the end I came to the conclusion that even in this spiritual realm, there is no certainty, there are only perceptions of reality, except one thing, 'I just am'. I could see that no one denied that they existed, that the supreme reality was existence itself. That was it, so-called enlightenment. Surely I realized that at the deepest level we just are. We are not this or that, we just are. The change in understanding may or may not help you. We live in the realm of the mind-body and problems don't end. That's how life is. So even though I started with the desire to tell people to pursue this 'enlightenment' thing, I can now see that there is no use. I still to face all the problems like any other human being. World was the same, is the same and will be the same. We all just are. What's the point then in all this, you may ask. Honestly, I don't know and I am not sure if anyone really knows. I generally try to have no structure for the mind, no concepts, nothing. So now for me there are only two certainties. One is that 'I just am' and another is uncertainty about everything else. I don't try to give hope or despair, tell good or bad, show light or darkness, these dualities are all relative. I just try to see things as they are. That's the main theme around all my work. I am just being real

I am very enthusiastic about anything tech (except the Math part of course). Well, I have dabbled into many frameworks and technologies and am currently into AI, IOT & Metaverse. I really

believe that tech if used rightly is going to help solve fundamental questions about our existence. I was a part of three startups before (which I had to leave cause of the same existential crisis I wrote about above). I also was a content creator regarding the same learnings I got from my experience but left it to focus more on applied science & technology

I generally use LinkedIn for expressing myself. You can WhatsApp me for any professional reasons or mail me for discussions and stuff. Thanks for reading so far

---

## Experience

Existence
Co-Founder
September 2023 - Present (2 months)

Working on the evolution of existence

Ujwala's Kitchen
Content Manager
May 2023 - September 2023 (5 months)

Handling social media channels, video editing, graphic design, and video shooting

The Revolution
Content Creator
January 2022 - April 2023 (1 year 4 months)

Learnt so much about social media, people and management. Tried to help other people based on what I experienced or observed in the past few years. No optimism or pessimism, just reality as it is

Healthilicious
